***Reasons for Allowance***

The prior art of record provides no teaching or suggestion to arrive at the method of separating ergosterol from hexane by supplying 1 and 100 ppm of water with respect to hexane such that no phase separation is formed between the hexane and water. Moreover, applicant found that the amount of water supplied depends on the type of solvent used, and by controlling the water supply, it becomes (unexpectedly) possible to obtain a granular ergosterol aggregate exhibiting good solid-liquid separation at a high yield. (The range of 1 and 100 ppm of water was determined (unexpectedly) to be critical in regard to hexane).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
